1 I. INTRODUCTION

2 Judge Rocconi was correct in finding that Judge McCarthy did not require
 3 Moog to identify its source code trade secrets line-by-line. Judge Rocconi was correct
 4 in recognizing that the “original purpose” of Judge McCarthy’s order was to
 5 determine whether “discovery was necessary to allow Moog to identify its trade
 6 secrets,” not to impose “any specific requirements for Moog’s trade secret
 7 identifications.” (Dkt. 534 at 5.) Judge Rocconi was correct in recognizing that this
 8 was the only interpretation consistent with binding precedent, as “the Ninth Circuit
 9 does not require line-by-line identification in all cases.” (*Id.* (citing *Integral Dev.*
 10 *Corp. v. Tolat*, 675 F. App’x 700, 703 (9th Cir. 2017) & *WeRide Corp. v. Kun Huang*,
 11 379 F. Supp. 3d 834 (N.D. Cal. 2019).) Indeed, as Moog pointed out at the hearing
 12 before Judge Rocconi, in Skyryse’s reply brief in support of the motion that resulted
 13 in Judge McCarthy’s order, Skyryse specifically disclaimed any requirement for a
 14 line-by-line source code identification: “Moog [] argues that providing a narrative
 15 response ‘would require Moog to list each and every line of code from the tens of
 16 thousands of source code files.’ Interrogatory No. 1 [Skyryse’s interrogatory seeking
 17 a trade secret identification] requires no such thing. It asks Moog to identify its trade
 18 secrets, not ‘every single line of non-public source code.’”¹ As Judge Rocconi
 19 presumably noted, it makes no sense that Judge McCarthy would order relief that
 20 Skyryse had not even requested.

21 On the other hand, Skyryse’s incorrect and unreasonable interpretation of Judge
 22 McCarthy’s order, if accepted, would unfairly impose an extraordinary burden on
 23 Moog. Defendants have stolen and misappropriated over 83,481 unique trade secret
 24 source code files. Even if Moog engineers were to expend just 10 minutes per file to
 25 identify specific lines of source code (undoubtedly a sizable underestimate
 26 considering the complexity and length of many or most of these files), it would take

27
 28 ¹ Citations and internal quotations omitted throughout this brief.

1 13,913.50 hours. This translates to approximately 14 Moog engineers working on
2 *just this task* for nearly 6 months, *full time*. These engineer hours would be diverted
3 from Moog's regular business—hours Moog does not have to spare, due not only to
4 its ongoing business servicing its customers but also to Skyryse's largescale poaching
5 of Moog engineering staff. These engineer hours also represent real dollars in terms
6 of engineering salary. Moog would also have to incur significant expense for outside
7 counsel to provide direction, coordination, and legal guidance for such a project.

8 Considering the above, Skyryse's claim that Moog failed to timely challenge
9 Judge McCarthy's order simply makes no sense whatsoever. Had Moog believed that
10 Judge McCarthy's order actually imposed such a draconian and undue burden—a
11 single project costing on the order of \$1 million dollars or more in engineering time,
12 opportunity cost to Moog's business, and attorney time—Moog would have had no
13 choice but to object. But, like Judge Rocconi, Moog did not interpret Judge
14 McCarthy's order to require a source code identification line-by-line. This makes
15 sense given that literally 10 days before that order was issued, Skyryse specifically
16 admitted that no line-by-line identification was required. Likewise, Skyryse's
17 argument that Judge Rocconi lacked authority to modify Judge McCarthy's order is a
18 red herring. Judge Rocconi never needed to make any such modification, as that order
19 did not require a source code identification line-by-line in the first place.

20 In reality, Skyryse is trying to exploit a single sentence in Judge McCarthy's
21 order—by stripping it of all relevant context and disregarding prevailing law—to gain
22 an unfair and tactical litigation advantage. Consideration of the entire order and the
23 relevant context demonstrates that Skyryse's interpretation is untenable. As Judge
24 Rocconi recognized after reviewing the parties' extensive briefing and hearing
25 substantial oral argument, Judge McCarthy was focused on whether Moog was
26 entitled to limited discovery before making its trade secret identification. Judge
27 McCarthy was not passing judgment on the sufficiency of an existing trade secret
28 identification, because none had been served yet. Had Judge McCarthy intended to

1 impose the extraordinary burden of a line-by-line identification, he would presumably
2 have done more than quote a single sentence from a law school journal article, with
3 no other mention of it in his 6-page order, not even in the summary of relief on the
4 last page. The lack of merit in Skyrise's objection is underscored by the dearth of
5 authority in its briefing. Skyrise cites only seven cases in its objection and not a
6 single one requires line-by-line identification of source code. In fact, some stand for
7 precisely the opposite.

8 Skyrise fails to satisfy its burden to demonstrate that Judge Rocconi's order
9 was "clearly erroneous or contrary to law" as required by Rule 72(a). Judge Rocconi's
10 interpretation of Judge McCarthy's order is the right one. It is the only interpretation
11 that can possibly be correct given the procedural history of this case, the context of
12 Judge McCarthy's entire order, applicable case law, and binding precedent. Skyrise's
13 objection should be overruled in its entirety.

14 **II. BACKGROUND**

15 **A. Judge McCarthy Orders that Moog Is Entitled to Certain** 16 **Discovery Before Making Its Trade Secret Identification**

17 On March 23, 2022, Skyrise served its first set of interrogatories on Moog.
18 Interrogatory No. 1 stated, "Identify, for each Defendant, each alleged Trade Secret
19 that You contend that Defendant misappropriated." (Dkt. 166-003, p. 7.) The
20 language of the interrogatory does not mention source code and does not ask for any
21 line-by-line identification of source code. (*Id.*) On April 13, 2022, Moog responded
22 to Interrogatory No. 1 by stating, "Pursuant to Federal Rule of Civil Procedure 33(d),
23 Moog will make its trade secrets at issue in this case available for inspection by
24 Defendant pursuant to an agreed upon Stipulated Protective Order and source code
25 protocol." (*Id.*, p. 7-8.) As Moog explained in subsequent meet and confer with
26 Skyrise, Moog believed that more discovery was necessary before it could make its
27 trade secret identification, because Moog still did not know the full scope of the theft
28 and misappropriation, especially given defendants' admitted spoliation of evidence.

1 (See, e.g., Dkt. 166-005, p. 2.) Nonetheless, on June 21, 2022, Skyryse filed a Motion
2 to Compel Trade Secret Identification. (Dkt. 166.) This motion sought to compel a
3 response to Skyryse’s Interrogatory No. 1. (*Id.*) It was not about the sufficiency of
4 an existing trade secret identification (because none had been served), but about
5 whether Moog was required to make an immediate trade secret identification. (See
6 Dkt. 166-001, p. 17.) Moog did not dispute that it would have to make a narrative
7 identification (in addition to identifying files), but believed that an immediate
8 identification was improper and premature. (See, e.g., Dkt. 180, p. 22.)

9 Moog had interpreted Skyryse’s motion to demand a line-by-line identification
10 of source code, and argued in opposition that this would be untenable given the
11 volume of source code files likely to be at issue. (See Dkt. 180, p. 9.) Moog also
12 noted there was no legal basis for any such requirement. (See *id.*) Skyryse, in its
13 reply brief, disclaimed any demand for a line-by-line identification of source code:

14 Moog [] argues that providing a narrative response “would
15 require Moog to list each and every line of code from the
16 tens of thousands of source code files.” Interrogatory No. 1
17 requires no such thing. It asks Moog to identify its trade
18 secrets, not “every single line of non-public source code.”

19 (Dkt. 194, p. 13.)

20 On July 22, 2022, Judge McCarthy granted-in-part and denied-in-part
21 Skyryse’s motion, granting Skyryse’s request that Moog identify its trade secrets
22 through a “narrative response and not solely by invoking Rule 33(d),” but denying
23 Skyryse’s request for immediate identification. (Dkt. 205 at 6 & n.3.) Judge
24 McCarthy found that Moog was entitled to limited discovery “necessary for Moog
25 to make that disclosure.” (*Id.* at 6 n.3.) Importantly, Judge McCarthy did not
26 prohibit Moog from identifying its trade secrets by reference to documents, only that
27 this could not be the “sole[]” method of identification. (See *id.* at 6.)

28 On page 4 of Judge McCarthy’s 6-page order, there is a single quotation from

1 a law school journal article that discusses methods for identifying source code:

2 “Where the plaintiff alleges misappropriation of source
3 code, it should identify the specific lines of code or
4 programs claimed to be secret by, for example, printing out
5 the code on paper with numbered lines and identifying the
6 allegedly misappropriated lines by page and line number,
7 by highlighting, or by color-coding.” Graves & Range at 95.

8 The article was published in 2006 in the Northwestern Journal of Technology &
9 Intellectual Property and authored by Charles Graves and Brian Range. According to
10 the article’s first footnote, the authors were “associates at Wilson Sonsini Goodrich
11 & Rosati” who prepared the article “in the interest of protecting employee mobility
12 and the right to use information in the public domain.” (Dkt. 475-012, p. 16 n.1.)
13 Judge McCarthy never provides commentary in his own words on this quoted
14 sentence or elucidates further on requirements for identifying source code. Nor does
15 he ever refer to source code again in the remainder of his order, not even on the last
16 page where he summarizes the relief ordered by the Court.

17 **B. Despite Defendants’ Delayed and Incomplete Productions, Moog**
18 **Timely Identifies Its Trade Secrets**

19 As noted above, in his July 22, 2022 order, Judge McCarthy ordered that “the
20 parties shall discuss what steps are necessary for Moog to make that disclosure,” i.e.,
21 what discovery was necessary for Moog to make its trade secret identification. (Dkt.
22 205 at 6 n.3.) However, the parties having reached an impasse regarding certain such
23 discovery, Moog filed a Motion to Compel Discovery Necessary for Further Trade
24 Secret Identification on August 3, 2022. (See Dkt. 210.) While this motion was
25 pending, the individual defendants compounded Moog’s lack of access to necessary
26 discovery by unilaterally *rescinding* Moog’s access to various of their respective
27 devices hosted by the parties’ neutral forensic vendor. (See Dkts. 216, 217.) This
28 resulted in a multiplicity of further motion practice. (See, e.g., Dkts. 228, 229, 234,

1 236, 237.) On August 29, 2022, Judge McCarthy ordered the restoration of Moog's
2 access to the rescinded devices. (*See* Dkt. 253.) On November 10, 2022, Judge
3 McCarthy orally ordered the production of certain materials before Moog would be
4 required to make its trade secret identification. (*See* Dkts. 278, 290, 292.)

5 On January 23, 2023, after the transfer of this case to this District, the Court
6 ordered that Moog serve its trade secret identification by February 20, 2023, which
7 rolled over to February 21 because February 20 was a federal holiday. (*See* Dkts. 346
8 at 16; Dkt. 343.) At this time, Moog still had not received discovery to which it was
9 entitled before making its identification, including the individual defendants'
10 communications for the period of March 7, 2019 through December 31, 2020.
11 Nonetheless, Moog timely made its trade secret identification on February 21
12 (hereafter, "Moog's TSID").² This identification comprised approximately a hundred
13 pages of narrative description for 30 trade secrets, identifying specific files names
14 corresponding to each trade secret described in the narrative. (*Compare* Dkt. 555-1,
15 p. 9 (claiming that Moog made its identification "without identifying a single file by
16 name") *with* Dkt. 475-055 & Dkt. 475-006 (directing the reader to specific tabs within
17 an Excel spreadsheet that identifies the specific files names and file paths
18 corresponding to each described trade secret).)

19 Claiming Moog's TSID did not satisfy the particularity requirements in Judge
20 McCarthy's order, Skyryse filed a Motion for Order for Enforcement of Order
21 Compelling Trade Secret Identification. (Dkts. 474, 475.) Skyryse argued that Judge
22 McCarthy's order required a line-by-line identification of source code, focusing on
23 the single quotation from the law school journal article. (*Id.*) After a hearing on the
24 motion, Judge Rocconi issued an order on June 14, 2023 finding that Moog had

26 ² In fact, the individual defendants did not produce these communications until May
27 2023, after Moog was forced to file a motion to enforce Judge McCarthy's
28 November 10 ruling. (Dkts. 432, 469.)

1 adequately identified 9 out of the 30 trade secrets and directing that Moog supplement
2 its identification for the remainder. (Dkt. 534.) Significantly, Judge Rocconi found
3 that “Judge McCarthy was not requiring Moog to identify any source code secrets
4 line-by-line.” (*Id.* at 5.) Judge Rocconi also stated that “[t]he Court interprets Judge
5 McCarthy’s order to require Moog to identify their trade secrets in compliance with
6 applicable legal guidance,” and the “Ninth Circuit does not require line-by-line
7 identification in all cases.” (*Id.* at 4, 5.)

8 **III. LEGAL STANDARD**

9 **A. A Magistrate’s Order on Discovery Disputes Is Entitled to** 10 **Deference**

11 A “magistrate judge’s decision in [] nondispositive matters is entitled to great
12 deference by the district court.” *United States v. Abonce-Barrera*, 257 F.3d 959,
13 969 (9th Cir. 2001). Particularly as to discovery disputes such as the one at issue
14 here, a “Magistrate is afforded broad discretion.” *Columbia Pictures, Inc. v.*
15 *Bunnell*, 245 F.R.D. 443, 446 (C.D. Cal. 2007); *see also St. Paul Mercury Ins. Co. v.*
16 *Hahn*, No. 13-CV-0424-AG-RNB, 2014 WL 12588631, at *1 (C.D. Cal. July 25,
17 2014) (noting that “magistrate judges’ decisions concerning discovery are subject to
18 great deference by district courts”). “A district judge may reconsider a magistrate
19 judge’s ruling on a non-dispositive motion only where it has been shown that the
20 magistrate [judge]’s order is clearly erroneous or contrary to law.” F.R.C.P. 72(a).
21 The “clearly erroneous” standard is applied to findings of fact and the “contrary to
22 law” standard is applied to legal conclusions. *Yent v. Baca*, No. 01- cv-10672-PA-
23 VBK, 2002 WL 32810316, at *2 (C.D. Cal. Dec. 16, 2002).

24 Skyryse contends that “Judge Rocconi’s determination of Judge McCarthy’s
25 order is a legal determination and should be analyzed *de novo*.” (Dkt. 555-1, p. 8
26 n.3.) Even if so, “de novo” review of a magistrate’s legal determination is still
27 constrained by deference. As the Ninth Circuit stated, “We may not overturn a
28 [magistrate’s] order simply because we might have weighed differently the various

1 interests and equities; instead, we must ascertain whether the order was contrary to
2 law.” *Rivera v. NIBCO, Inc.*, 364 F.3d 1057, 1063 (9th Cir. 2004). “[T]he Court
3 may not simply substitute its judgement for that of the Magistrate Judge.” *Almont*
4 *Ambulatory Surgery Ctr., LLC v. UnitedHealth Grp. Inc.*, No. 14-cv-03053-MWF-
5 AFM, 2016 WL 6821116, at *2 (C.D. Cal. June 17, 2016). An “order is ‘contrary to
6 law’ when it fails to apply or misapplies relevant statutes, case law or rules of
7 procedure.” *Id.* As explained below, Judge Rocconi’s order is not contrary to law.

8 **B. Judicial Decisions Must Be Interpreted in Context, Not “Literally”**

9 Skyryse’s motion advocates for a “literal” interpretation of the single
10 quotation in Judge McCarthy’s order from the law school journal article. (*See, e.g.*,
11 Dkt. 555-1, pp. 2, 7, 9, 10, 11 (referring to literal interpretation of the single
12 quotation at least 5 times, i.e., “literal instructions” (twice), “literal interpretation,”
13 “literal reading,” and the single quotation “if taken literally”). But a “literal”
14 interpretation, disregarding the context and record, is not the correct way to interpret
15 a judicial decision.

16 The Ninth Circuit has repeatedly held that when interpreting a judicial
17 decision, “a court reads the language of the decision in the context of the decision as
18 a whole and the entire record before [the deciding judge].” *Upper Skagit Indian*
19 *Tribe v. Sauk-Suiattle Indian Tribe*, 66 F.4th 766, 770 (9th Cir. 2023). “Much like
20 we do not interpret a statute by cherry-picking one word out of it, we should not
21 pluck one sentence out of an opinion without looking at its context.” *Borden v.*
22 *eFinancial, LLC*, 53 F.4th 1230, 1235 (9th Cir. 2022) (rejecting “an acontextual
23 reading of a snippet divorced from the context of . . . the entire opinion”). Likewise,
24 a “decision must be read in the context of its facts.” *Whittaker Corp. v. Execuair*
25 *Corp.*, 736 F.2d 1341, 1346 (9th Cir. 1984). Other federal courts of appeal likewise
26 hold that “when interpreting and applying words in a judicial opinion, we must
27 consider the context, such as the question the court was answering, the parties’
28 arguments, and facts of the case.” *Nealy v. Warner Chappell Music, Inc.*, 60 F.4th

1 1325, 1332 (11th Cir. 2023); *see also, e.g., Samirah v. Holder*, 627 F.3d 652, 660
2 (7th Cir. 2010) (“[I]t is important in interpreting judicial opinions . . . to read words
3 in context.”). “Because ‘[o]pinions, unlike statutes, are not usually written with the
4 knowledge or expectation that each and every word may be the subject of searching
5 analysis,’ we do not follow statutory canons of construction with their focus on
6 ‘textual precision’ when interpreting judicial opinions.” *Upper Skagit Indian Tribe*,
7 66 F.4th at 770 (citing *United States v. Muckleshoot Indian Tribe*, 235 F.3d 429, 433
8 (9th Cir. 2000)). Moreover, a court must interpret a judicial decision “so as to give
9 effect to the intention of the issuing court.” *Muckleshoot Tribe v. Lummi Indian*
10 *Tribe*, 141 F.3d 1355, 1357 (9th Cir. 1998) (citing *Narramore v. United States*, 852
11 F.2d 485, 490 (9th Cir. 1988)).

12 As explained below, read in its proper context, the single quotation from the
13 law school journal article cannot be correctly interpreted to mean that Judge
14 McCarthy required a line-by-line identification of over 80,000 files of source code.

15 **IV. ARGUMENT**

16 **A. Judge Rocconi Correctly Interpreted Judge McCarthy’s Order**

17 1. Judge Rocconi correctly interpreted the single quotation in the 18 context of the record.

19 As explained in Section II (“Background”), Judge McCarthy was adjudicating
20 a dispute focused on the timing of Moog’s identification, i.e., whether it would be
21 made before or after certain discovery. Importantly, Moog’s TSID was not before
22 Judge McCarthy at the time he issued his July 22, 2022 order (the order Skryse
23 sought to enforce before Judge Rocconi). Thus, Judge McCarthy was not
24 adjudicating the sufficiency of any existing trade secret identification (because none
25 had been made). Likewise, Judge McCarthy was not adjudicating the sufficiency of
26 any identification of source code (again, because none had been made). In light of
27 this, it stands to reason that Judge McCarthy was not intending to impose corrective
28

1 measures or bright line rules upon a trade secret identification that he had not yet
2 seen.

3 Indeed, when Judge McCarthy issued his July 22, 2022 order, he specifically
4 tied it to Skyryse’s Interrogatory No. 1. (*See* Dkt. 205 at 6 (stating the Court would
5 exercise its discretion “by requiring Moog to ‘answer in full Skyryse’s Interrogatory
6 No. 1’”).) Skyryse itself had tied the trade secret identification to that interrogatory,
7 expressly stating in its reply brief that the interrogatory required “Moog to identify its
8 trade secrets, not every single line . . . of source code.” (Dkt. 194, p. 13.) It is
9 reasonable to infer that Judge McCarthy did not order relief that Skyryse itself did not
10 request and even specifically disclaimed (i.e., a line-by-line identification of source
11 code).

12 2. Judge Rocconi correctly interpreted the single quotation in the
13 context of the entire order.

14 Judge Rocconi interpreted the single quotation by “[r]eading the order in
15 full.” (Dkt. 534 at 4-5 (“Reading the order in full supports [the finding that Moog
16 was not required to identify its source code line-by-line] as the most reasonable
17 interpretation.”).) This was the correct approach. Reading the order in full, Judge
18 Rocconi correctly found that the “original purpose” of the order was to stay
19 discovery “except for what was necessary to allow Moog to identify their trade
20 secrets, and then generously included ample legal guidance to allow Moog to
21 provide a sufficient identification.” (Dkt. 534 at 5.) Reading the order in full, Judge
22 Rocconi also correctly found that “the purpose of the order was [not] to outline any
23 specific requirements for Moog’s trade secret identifications.” (*Id.*)

24 By contrast, Skyryse’s interpretation of the single quotation is not reasonable
25 when reading the order in full. Skyryse characterizes the single quotation from the
26 law school journal article as a “mandate” (twice), “central directive” (twice), and
27 “central instruction[.]” (Dkt. 555-1, p. 6, 8 & n.3, 9.) But this cannot be correct for
28 several reasons. *First*, Judge McCarthy does nothing to draw any specific attention

1 to that single quotation to indicate it is either a “mandate” or “central.” Had Judge
2 McCarthy intended either, he would presumably have referred to the substance of
3 the single quotation again at the end of his order where he summarizes the relief
4 ordered, or provided more commentary in his own words. Moreover, Judge
5 McCarthy sprinkles at least 10 different quotes from the same law school journal
6 article throughout the order. There is nothing to indicate that any of the quotes are
7 any more “central” than any other, or that any one is a “mandate” whereas the others
8 are not.

9 *Second*, the overall manner in which Judge McCarthy quotes the law school
10 journal article suggests that the quotations are not mandates, but context and support
11 for the relief actually ordered on page 6 (i.e., that Moog must identify its trade secrets
12 “through a narrative response and not solely by invoking Rule 33(d),” that the
13 identification need not be made “immediately,” and that “the parties shall discuss
14 what steps [i.e., discovery] are necessary for Moog to make that disclosure”). For
15 example, many of the quotations address the *consequences* of certain actions, which
16 may support the ultimate relief ordered, but could not constitute “mandates”
17 themselves. (*See, e.g.*, Dkt. 205 at 2 (stating that Skyrise’s request for an immediate
18 identification ““may cause new rounds of depositions and other discovery as the
19 parties scramble to assess the newly-provided information””) (quoting the law school
20 journal article).)

21 *Third*, the law school journal article was, according to its own footnote, written
22 “in the interest of protecting employee mobility and the right to use information in the
23 public domain.” (Dkt. 475-012, p. 16 n.1.) As an objective jurist, Judge McCarthy
24 presumably did not intend to substitute a single quotation from a pro-defendant source
25 as his “mandate.”

26 Importantly, right before the single quotation at issue, Judge McCarthy quotes
27 from the *Proofpoint* case (see green highlighted portion of snippet below from order):
28

Therefore, Moog must “sufficiently identif[y] its source code secrets”. Proofpoint, Inc. v. Vade Secure, Inc., 2020 WL 836724, *2 (N.D. Cal. 2020). “Where the plaintiff alleges misappropriation of source code, it should identify the specific lines of code or programs claimed to be secret by, for example, printing out the code on paper with numbered lines and identifying the allegedly misappropriated lines by page and line number, by highlighting, or by color-coding.” Graves & Range at 95.

This is the only case that the order refers to for “source code,” and Judge McCarthy presumably read and considered it in formulating the relief he ordered.³ *Proofpoint* specifically does **not** require a line-by-line identification. To the contrary, *Proofpoint* provides, as an “example of sufficient disclosure” of source code, a “‘twenty-page identification of ten specific trade secrets’ that ‘described the functionality of each, along with named files from [plaintiff’s] code base reflecting the source code specific to each trade secret.’” *Proofpoint, Inc. v. Vade Secure, Inc.*, No. 19-cv-04238-MMC, 2020 WL 836724, at *2 (N.D. Cal. Feb. 20, 2020) (quoting *Citcon USA, LLC v. RiverPay Inc.*, No. 18-cv-02585-NC, 2019 WL 2603219, at *2 (N.D. Cal. June 25, 2019)). In other words, *Proofpoint* described a sufficient disclosure of source code that did **not** include a line-by-line identification.

Notably, *Citcon*, the case cited by *Proofpoint*, was itself describing the source code identification in the *WeRide* case—the same case that Judge Rocconi relied on in her order (*see* Dkt. 534, p. 5) and one of Moog’s leading cases featured prominently in Moog’s briefing to Judge Rocconi (*see* Dkt. 475, pp. 27, 29, 31). Namely, the *Citcon* case found as follows:

³ *Proofpoint* was also before Judge Rocconi. (*See* Dkt. 475, pp. 14, 39.) Therefore, Skyrise’s suggestion that Judge Rocconi based her order entirely on Ninth Circuit law not before Judge McCarthy is incorrect.

1 [A] court in this district recently found that the plaintiff
2 in *WeRide* had sufficiently identified its source code trade
3 secrets for purposes of a preliminary injunction motion
4 when it filed a twenty-page identification of ten specific
5 trade secrets and described the functionality of each, along
6 with named files from its code base reflecting the source
7 code specific to each trade secret. *WeRide Corp. v. Huang*,
8 2019 WL 1439394, No. 19-CV-07233-EJD, at *5–6 (N.D.
9 Cal. Apr. 1, 2019).

10 2019 WL 2603219, at *2 (underlined portions are quoted by *Proofpoint*). In other
11 words, either directly or through intermediate authorities, both Judge McCarthy and
12 Judge Rocconi relied on *WeRide*, a case where a sufficient source code identification
13 did not include a line-by-line identification.

14 3. Judge Rocconi correctly interpreted the single quotation in the
15 context of the circumstances of the case.

16 At the hearing on the motion before Judge Rocconi, in response to Her
17 Honor’s question, Moog estimated off-the-cuff that a line-by-line identification of
18 source code would take “four to six months.” (June 7, 2023 Hrg. Tr. at 49:13-
19 50:16.) Judge Rocconi was correct to inquire about the burdens in this case. *See*
20 *Microvention, Inc. v. Balt USA, LLC*, No. 20-cv-02400-JLS-KES, 2021 WL
21 4840786, at *4 n.3 (C.D. Cal. Sept. 8, 2021) (considering the “extreme[]” burden to
22 plaintiff in having to identify specific portions of each stolen document given the
23 “scale” of the defendant’s theft, noting that such “factual circumstances can be
24 considered by the Court in determining whether Plaintiff has identified trade secrets
25 with reasonable particularity”). Moog has looked more closely at the actual burden
26 that would be involved in making a line-by-line identification, and it is
27 extraordinary. A line-by-line identification would be done against source code files
28 that are written by humans in programming languages, such as C, C++, and Python.

1 Such source code files have extensions such as .c, .h, .cpp, and .py. Counting the
2 unique number of .c, .h, .cpp, and .py files that were stolen by the defendants and
3 identified in Moog's TSID, there are 83,481 unique files.⁴ Any of these files could
4 have thousands of lines of code. Even if a Moog engineer could parse a single file
5 for a line-by-line identification in approximately ten minutes (a very conservative
6 underestimate, given the complexity of the technology and size of many of the
7 files), it would require 13,913.50 hours of engineer time. At that rate, it would take
8 14 Moog engineers nearly six months (i.e., 24.8 weeks at 40 hours per week per
9 engineer) to complete a line-by-line identification of source code. On top of that,
10 outside counsel would need to provide direction, coordination, and legal guidance
11 for such a project. Considering wages, fees, and the opportunity costs of diverting
12 engineers from their regular work, the project could cost on the order of \$1,000,000
13 or more to Moog.

14 This would be an extreme burden in any case, but here in particular Moog
15 would be hard-pressed to set aside 14 Moog engineers for such a project, as Skyrise
16 has raided at least 20 of Moog's employees. Moog has no engineers to spare full
17 time for a project that would take at least half-a-year. Furthermore, it would be
18 inefficient and impractical for either technical outside counsel or retained experts to
19 conduct a line-by-line identification because Moog engineers are far more familiar
20 with the code and technology, which is highly specific to Moog.

21
22 ⁴ Skyrise argues that in Moog's trade secret identification, its "alleged trade secrets
23 primarily consist of software" and that "virtually all of [the trade secrets]" comprise
24 source code or software programs." (Dkt. 555-1, pp. 5, 14.) This is incorrect.
25 Moog's investigation resulting and reflected in the TSID reveals that defendants
26 stole far more than originally thought, such that much or even the majority of the
27 stolen materials is not source code or software. (See Dkts. 475-005 & 475-006.)
28 Such other stolen materials include documents relating to hardware, actuation, and
electronics. (See *id.*) This is consistent with the fact that all the unique .c, .h, .cpp,
.py files combined constitute less than one third of the 291,095 unique files
identified in Moog's TSID file listings.

1 4. Even a “literal” interpretation of the single quotation does not
2 require a line-by-line identification.

3 Skyryse contends that the single quotation from the law school journal article
4 is susceptible to only one “literal” interpretation, i.e., that source code must be
5 identified line-by-line. This is incorrect. The single quotation reads:

6 Where the plaintiff alleges misappropriation of source code,
7 it should identify the specific lines of code or programs
8 claimed to be secret by, for example, printing out the code
9 on paper with numbered lines and identifying the allegedly
10 misappropriated lines by page and line number, by
11 highlighting, or by color-coding.

12 (Underlining added.) But the phrase “specific lines of code or programs” could
13 actually be parsed in multiple ways, given the conjunctive “or”:

- 14 • “specific lines of” could modify “code” and “programs,” to mean that
15 source code should be identified by *specific lines of code* or *specific lines*
16 *of programs* (Skyryse’s interpretation);
- 17 • “specific” could modify “lines of code” and “programs,” to mean that
18 source code should be identified by *specific lines of code* or *specific*
19 *programs*;
- 20 • “specific” could modify “lines of code” but not “programs,” to mean that
21 source code should be identified by *specific lines of code* or *programs*.

22 Parsed according to the second or third bullets, the portion following “for
23 example” would be examples of identifying “specific lines of code” rather than
24 examples of identifying programs or specific programs. In other words, there is
25 nothing about the structure of the sentence that would “require” Skyryse’s
26 interpretation (i.e., the first bullet). Notably, parsed according to the second or third
27 bullets, there is no dispute that Moog has identified its trade secrets by programs or
28 specific programs. In fact, Moog’s TSID has a section titled, “Moog’s Identification

1 of Trade Secrets by Program.” (See Dkt. 475-006, p. 46.)

2 Judge Rocconi correctly found that the quote’s use of the phrase “for example”
3 in the sentence suggests guidance rather than a mandate. The use of the word “should”
4 rather than “shall” or “must” (in the phrase “it should identify”) also suggests
5 guidance rather than a mandate. This is a reasonable interpretation, and should not
6 be disturbed.

7 **B. Judge Rocconi’s Order Is Not Contrary to Law**

8 Judge Rocconi’s interpretation of Judge McCarthy’s order is not contrary to
9 law. In fact, it is the only interpretation that actually comports with the law.

10 1. The Ninth Circuit does not require a line-by-line identification of
11 source code.

12 Judge Rocconi was correct in finding that “the Ninth Circuit does not require
13 line-by-line identification in all cases.” (Dkt. 534 at 5.) In *WeRide Corp. v. Kun*
14 *Huang*, a case Judge Rocconi cited, a defendant stole 1,192 files from the plaintiff,
15 and the court found that the plaintiff’s TSID was sufficient because it “describes the
16 functionality of each trade secret” and “names numerous files in its code base . . . that
17 reflect the source code specific to each alleged trade secret.” 379 F. Supp. 3d 834,
18 844 (N.D. Cal. 2019). The court rejected defendant’s argument that “the plaintiff
19 must identify the specific code,” finding that “this argument is wrong on the law,”
20 citing *Integral Development, Citcon* (an earlier decision than the *Citcon* decision
21 referred to in Section IV.A.2, *supra*), and *Social Apps*. (*Id.* at 846.)

22 In *Integral Dev. Corp. v. Tolat*, No. 12-cv-06575-JSW, 2015 WL 674425 (N.D.
23 Cal. Feb. 12, 2015), the district court found that a plaintiff’s identification that
24 “list[ed] hundreds of file names without identifying the trade secret information
25 contained within the files, is insufficient.” *Id.* at *4. The Ninth Circuit reversed,
26 finding that by alleging that the defendant had copied its files onto an external hard
27 drive shortly before leaving plaintiff’s employ, describing the categories of
28 documents that contained trade secret material, and identifying those files that

1 contained trade secret material, the plaintiff had “identified specific key aspects” of
2 its trade secrets and “sufficiently identified the information it alleges is a trade secret.”
3 *Integral Dev. Corp. v. Tolat*, 675 F. App’x 700, 703 (9th Cir. 2017). In other words,
4 the Ninth Circuit rejected the district court’s finding that the plaintiff must identify
5 portions “within” the source code files claimed to be trade secret.

6 In *Citcon USA, LLC v. RiverPay Inc.*, No. 18-cv-02585-NC, 2018 WL
7 6813211, at *4 (N.D. Cal. Dec. 27, 2018), the court expressly found that identifying
8 the “processing algorithms” for source code was sufficient:

9 Citcon alleges that it owns source code for a variety of
10 purposes, and lists the algorithms that were
11 misappropriated. This includes five identified payment
12 processing algorithms. The description provided of these
13 algorithms is sufficiently particular to give the defendants
14 notice of the boundaries of the case. At this stage, Citcon
15 is not required to hand over the algorithms themselves or
16 otherwise disclose the source code to give the defendants
17 notice of the contours of this claim in order to prepare a
18 defense.

19 *Id.* at *4 (citation omitted). In other words, the *Citcon* court found that identifying
20 the “algorithms” was sufficient and, like the Ninth Circuit in *Integral Development*,
21 did not require the plaintiff to identify specific portions within each file claimed to be
22 trade secret.

23 In *Social Apps* the court stated, not once but twice, that identification of trade
24 secrets by **file name** was permissible. See *Social Apps, LLC v. Zynga, Inc.*, No. 11-
25 cv-04910-YGR, 2012 WL 2203063, at *4 (N.D. Cal. June 14, 2012) (finding that
26 disclosures “identifying specific lines of code **or** file names are sufficiently detailed
27 to identify what it is that [plaintiff] claims is secret”) (emphasis added); *id.* at *5
28 (finding that the “two instances where [plaintiff] identified a specific file name **or**

1 source code line numbers” was sufficient) (emphasis added). In other words,
2 identifying source code line-by-line was just one of *two* acceptable methods of
3 identification, the other being a listing of file names (which Moog has done in addition
4 to providing a narrative description).

5 Other district court authority from the Ninth Circuit is in accord. For
6 example, in *Microvention*, the plaintiff contended that “each document in and of
7 itself . . . is the trade secret.” 2021 WL 4840786, at *4 (underlining in original).
8 The defendants countered that “identifying a document can never satisfy the
9 [applicable] requirements” and that the plaintiff must identify the specific portions
10 of the documents that constitute the trade secret. The court rejected the defendant’s
11 argument, stating they cited no binding authority, as well as the following:

12 [E]ven if only some of the information in the document is a
13 trade secret, it would be extremely burdensome to require
14 Plaintiff to list them all—a burden created by the scale of
15 the allegations of theft against [defendant]. These unique
16 factual circumstances can be considered by the Court in
17 determining whether Plaintiff has identified trade secrets
18 with “reasonable particularity” by referencing documents.

19 *Id.* at *4 n.3. We have the same situation here. The fact that we have over 80,000
20 unique source code files identified in our TSID is a result of the defendants’ theft of
21 1.4 million files from Moog.

22 2. Skyryse identifies no authority in support of its position.

23 Skyryse relies on seven cases in support of its objection. (See Dkt. 555-001,
24 Table of Authorities.) Four of these pertain to trade secret identifications: *Proofpoint*,
25
26
27
28

1 *Citcon*, *Social Apps*, and *Keywords*.⁵ None of these four cases require a line-by-line
2 identification of source code. Both *Proofpoint* and *Citcon* specifically identified an
3 example of sufficient disclosure of source code that did **not** include a line-by-line
4 identification. (See Section IV.A.2.) *Social Apps*, meanwhile, expressly allowed for
5 identification of trade secrets by **file name**. (See Section IV.B.1, *supra*.)

6 In *Keywords*, the court never found that a line-by-line identification of source
7 code was necessary. There, the plaintiff identified one trade secret, described as a
8 “Method of Retrieving Information Using Combined Context Based Searching and
9 Content Merging.” *Keywords, LLC v. Internet Shopping Enterprises, Inc.*, No. 05-
10 cv-2488-MMM, 2005 WL 8156440, at *17 (C.D. Cal. June 29, 2005). The court
11 found that the identification was insufficient because the plaintiff had not explained
12 the “nature of the Method” or indicated where the method was reflected in the
13 allegedly stolen source code. *Id.* That is not what we have here, where Moog’s TSID
14 describes the “nature” of the trade secrets in a narrative approximately a hundred
15 pages long and keys the narrative to the subject files. *Keywords* also involved just
16 one trade secret at issue (*see id.*), whereas here there are at least 30.

17 3. The single quotation from the law school journal article has no
18 applicable legal support.

19 In the end, the only “authority” Skyrise has for the line-by-line requirement is
20 the single quotation from the law school journal article. However, that single
21 quotation is itself lacking in any applicable legal support. Instead, it was merely the
22 authors’ proposal, based on their admittedly pro-defendant policy goals, as to how
23 source code trade secrets “should” be identified. (Dkt. 475-012, pp. 11 & 13
24 (showing that the single quotation at issue is in a section titled “PROPOSALS”), p.

25
26 _____
27 ⁵ The other three cases cited by Skyrise pertain to the standard of review (*Taylor*)
28 and to whether a transferee court may reconsider the order of a transferor court
(*Danner* and *Hall*).

1 16 n.a1 (admitting that the article was written “in the interest of protecting employee
2 mobility”); *see also* Section IV.A.2, *supra*.) The authors cite a single case in
3 connection with the sentence at issue (*see* Dkt. 475-012, p. 13 n.85), the *Compuware*
4 case, which does not in fact support the proscriptive suggestion by the authors. In
5 that case, the defendant “emphatically denie[d] that it had access to any such
6 [plaintiff] source code, and [plaintiff] has not submitted evidence of such access.”
7 *See Compuware Corp. v. Int’l Bus. Machines Corp.*, No. 02-cv-70906, 2003 WL
8 23212863, at *4 (E.D. Mich. Dec. 19, 2003). The plaintiff failed to identify any
9 source code that had “been taken by IBM,” the defendant. *Id.* at *5-6. Thus, the
10 issue in *Compuware* was not whether stolen source code was identified line-by-line,
11 but whether source code was stolen *at all*. By contrast, it is undisputed that
12 defendants took source code files from Moog. Nowhere in *Compuware* does the
13 court require a line-by-line identification of source code.

14 **C. Judge Rocconi’s Interpretation Is Correct, But Even If Not, the**
15 **Court Has the Power to Reconsider Judge McCarthy’s Order**

16 Judge Rocconi’s interpretation of Judge McCarthy’s order is correct and
17 comports with Ninth Circuit law. Contrary to Skyrse’s argument, Her Honor’s
18 interpretation was not an “effective reversal” of the order, but instead a correct
19 reading of it. Even if the Court were to disagree with Judge Rocconi’s
20 interpretation, however, and find that Judge McCarthy’s order does require a line-
21 by-line identification of source code, this Court should exercise its power to
22 reconsider the order.

23 In the *Hall* case, which Skyrse cites, the court stated that while “law of the
24 case directs a court’s discretion, it does not limit the tribunal’s power.” *Hall v.*
25 *Alternative Loan Trust*, No. 2:13-cv-1732-KJM, 2013 WL 5934322, at *2 (E.D. Cal.
26 2013). As Skyrse acknowledges, a court may reconsider a prior ruling of a
27 transferor court “when new evidence becomes available,” “when a clear error has
28 been committed,” or “when it is necessary to prevent manifest injustice.” *Id.*

1 Here, there is “new evidence,” namely, Moog’s TSID. This new evidence
2 was not before Judge McCarthy when he issued his July 22, 2022 order, so he did
3 not have the benefit of considering it. Judge McCarthy did not have the new
4 evidence, for example, that over 80,000 unique source code files are at issue, and
5 that to conduct a line-by-line identification, assuming just 10 minutes per file, would
6 take nearly 14,000 hours or more of Moog engineering time alone. Judge McCarthy
7 also did not have another piece of new evidence—that there are approximately
8 2,766 misappropriated Simulink source code files that have no “lines” to be
9 identified. As explained in Section IV.A.3, source code is written in a programming
10 language. But some programming languages are not textual, but graphical.
11 Simulink source code is one such example. Simulink source code is constructed
12 using a graphical interface, where the coder uses graphical blocks representing
13 specific functions and arranges them in complex diagrams (later translated into text
14 that can be compiled and executed by a computer). An example of such a file from
15 Moog’s TSID is shown below:⁶

16

20
21
22
23
24
25 ⁶ The name of this file is “” and can be found in the TERN tab
26 of the Excel attached as Exhibit 2 to Moog’s TSID. (See Dkt. 475-005, p. 1071
27 (flattened PDF version of the Excel that was submitted by Skyrise to Judge
28 Rocconi).)

Moog's TSID lists approximately 2,766 Simulink files (i.e., files ending in .slx or .mdl). These are source code files that are incapable of "line-by-line" identification. Such identification of all of Moog's trade secret source code files is therefore not even possible.

To the extent the Court interprets Judge McCarthy to have required a line-by-line identification, then "clear error has been committed" by Judge McCarthy. As explained in Section IV.B.1, requiring a trade secret identification to identify source code line-by-line does not comport with Ninth Circuit law. It would also result in "manifest injustice" here, given Skyrise expressly disclaimed any requirement of a line-by-line identification (*see* Section IV.A.1) and given the extraordinary burden it would impose on Moog (*see* Section IV.A.3). It was defendants' theft of 1.4 million

1 files that brought us here in the first place. To require Moog to expend
2 approximately 14,000 hours (and likely far more) of engineering time to conduct a
3 line-by-line identification of the stolen source code files would only multiply
4 Moog's injury, cause undue delay in this case, and thereby reward defendants for
5 their theft.

6 **V. CONCLUSION**

7 There is no reason to disturb Judge Rocconi's order, and every reason to affirm
8 it. Skyryse's objection to Judge Rocconi's order should be overruled.
